

Program Scientist Report
to
Sounding Rocket Working Group

Mary Mellott
January 19, 2005

SRWG 1/19/05

SCIENCE MANAGEMENT PROCESS ACTION TEAM

During the last quarter of each fiscal year the SRPO

- compiles a list of all requested future flights
- attaches a dollar value to each flight
- sends the list to the HQ Program Officer
- who consults with the Discipline Scientists
- validating and prioritizing the flight requests
- Program Officer prepares the new FY Fly List
- submits it to the SRPO
- who works with NSROC to implement it
- Significant changes negotiated with the PO and the affected Discipline Scientists.

The Sounding Rocket Independent Review Team Report of the
Programmatic Elements and Cost Structures
Of the Wallops Flight Facility Sounding Rocket Program Office

September 2004 - Team assembled

October 21/22, 2004 - Review at WFF

December 10, 2004 - Report Submitted

Team Members

Mr. Gary Rawitscher

Chairman

Mr. Gerry Daelemans

Executive Secretary

Ms. Latonya Alexander

Program Analyst

Mr. Paul DeMinco

Technical Member

Ms. Jane Green

Program Analyst

Ms. Renee Leck

Program Analyst

Dr. Mary Mellott

Science Member

Ms. Karen Poniatowski

Technical Member

Dr. Wilton Sanders

Science Member

REVIEW TEAM OBSERVATIONS

1. The Sounding Rocket Program is extremely well managed by a dedicated, hard-working group that epitomizes NASA's efforts to explore the Universe and engage the next generation of explorers. Heroic efforts to meet customer, public, or other stakeholder needs are common.
- 2.a. The various HQ elements that fund sounding rocket science do not coordinate effectively enough with each other to ensure a rational set of demands on the Sounding Rocket Program.
- 2.b. There is little incentive to minimize total mission-specific requirements, either at or following selection

REVIEW TEAM OBSERVATIONS, cont.

3. The program has a significant long-term problem in that the user community wants a higher-end mix of missions than the program can currently afford.

While there is some room for modification of both WFF SRPO and NASA HQ processes around the implementation of the NASA Sounding Rocket Program, there are no significant changes to be made that will result in an increase of high performance missions without a commensurate increase in budget to the program or a reduction of the requirements it needs to address

OBSERVATION 2.a

Observation: The various HQ elements that fund sounding rocket science do not coordinate effectively enough with each other to ensure a rational set of demands on the Sounding Rocket Program.

Responses:

1. Reinstitute HQ Sounding Rocket Team
2. Per SM-PAT, institute an annual review of the flight manifest

OBSERVATION 2.b

2.b. There is little incentive to minimize total mission-specific requirements, either at or following selection

Response

- Require proposing PI's to include sufficient information about anticipated programs to allow the SRPO to make a ROM cost estimate for the associated operational support
- Discipline Scientist sends copies of all proposals in the competitive range for selection to the SRPO
- SRPO reports estimated costs back to Discipline Scientist, who takes them into account in making recommendation for selection

RESPONSE TO 2.b, cont.

- a. Launch site
- b. Launch date and window requirements
- c. Apogee and/or observation time requirements
- d. Experiment section weight, diameter, length and CG estimate e. Desired layout of the experiment section(s)
- f. ACS pointing requirements
- g. Telemetry data rates, number of links anticipated
- h. Experiment power requirements and power cleanliness requirements
- i. Special systems requirements (GPS, vacuum, video cameras, deployment mechanisms, payload purging, etc)
- j. Recovery requirements (if any)
- k. Special launch considerations (duration between launches, special requirements, window constraints, etc)
- l. Schedule for the instruments (or experiment section)
- m. Hardware to be built by NSROC (skins, structures, doors, fixtures, etc)
- n. Other...
